(54) **CONDOM SYSTEM FOR HEIGHTENING SEXUAL SENSIBILITY**

(57) Abstract:

PURPOSE: To enhance sexual sensibility by providing a protrusion at an upper part of a condom to stimulate the G-spot of a female genital organ in contact therewith.

CONSTITUTION: A part 2 of a condom 1 is formed to be convex at a spot. When the condom 1 is put on, air enters a convex formed part to make a protrusion 2 so that the protrusion 2 contacts the G spot of a female genital organ to enhance sexual sensibility by stimulating the part. A magnet made of ferrite or metal or a magnetic body (powder, sheet) can be mounted, bonded formed integrally on the protrusion 2 being formed by blowing up a part of the condom 1. In this case, blood-stream is promoted by the magnetic force, thereby enabling the obtaining of higher comfortableness in use
